

Polk County Florida relies on GWAVA Retain Mobile for Effective Regulatory Compliance

Polk County, Florida is located in the center of the Florida peninsula on the I-4 corridor. At the geographic center of Florida, its 7.5 million residents make it one of the largest concentrations of population in the southeast.

To assure that its residents are properly served, Polk County proactively implements and complies with Sunshine laws and the Freedom of Information Act.

When Polk County was ready to implement a communications system for its 220 users, they chose BlackBerry because of the security and logging capabilities.

To assure openness in governance and to maintain integrity with its citizens, the county must be able to provide history for all text and phone communication between employees and with constituents. And despite BlackBerry's logging, the EMM logs on the BlackBerry Enterprise Service are not enough to fulfill this need.

To assure that all mobile communication was archived, Polk County purchased and installed GWAVA Retain Mobile for each of its BlackBerry users. Retain Mobile integrates with the BlackBerry Enterprise Service to take the logs and archive them in a compliant, searchable, and discoverable archive. All SMS/MMS, BBM, BBM Enterprise, PIN and phone call logs are stored and can be viewed in context. This fully compliant archive can be searched for auditing, discovery, and compliance needs.

This GWAVA solution has been expertly serving the Polk County since 2010.

Retain archives all electronic communications, including email and social media. All messages are securely stored in a single, unified Retain data archive and can be easily accessed through the Retain Web Access Archive Viewer, giving you a fully compliant, searchable, and discoverable archive.

For more information on Retain for BlackBerry and the need to archive mobile communication, visit www.GWAVA.com/RetainMobile
